1. Problem Statement

The Global Superstore dataset contains business information related to sales, profits, orders, customers and product categories. Analysing these metrics individually makes it difficult for executive management to monitor overall business performance and evaluate organizational goals. Therefore, there is a need to develop an interactive Executive Dashboard and Business Scorecard using Power BI to visualize key performance indicators (KPIs), compare actual performance against predefined targets, analyse business trends and support effective data-driven decision-making.

2. Solution

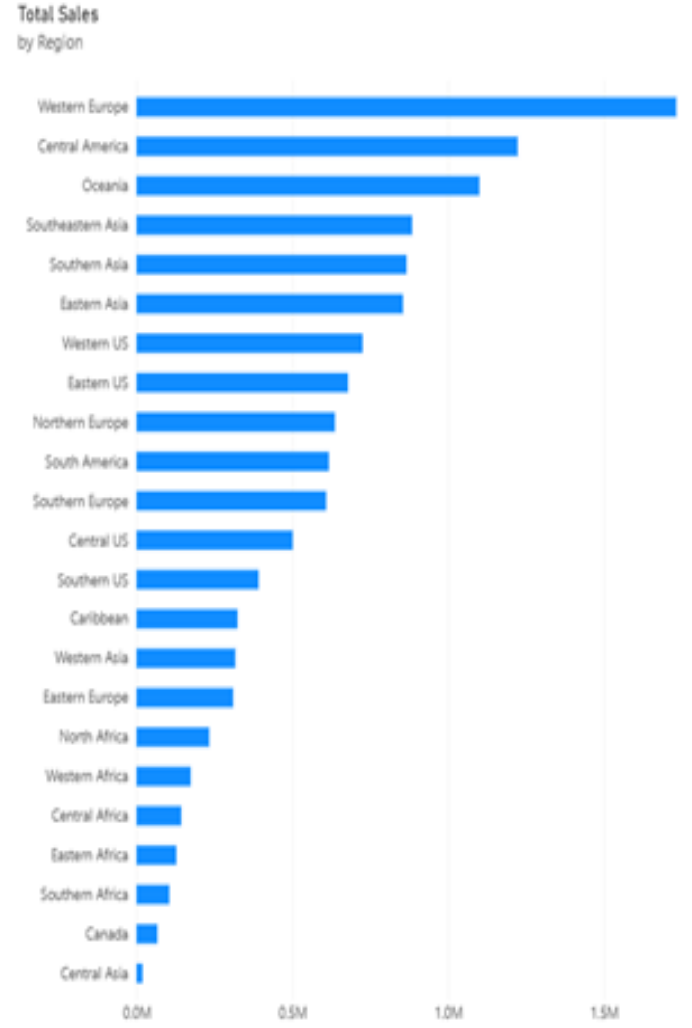

- Loaded the Global Superstore dataset into Microsoft Power BI.
- Created DAX measures for Total Sales, Total Profit, Total Orders and Profit Margin.
- Developed four KPI Cards to display key business performance indicators.
- Created a Sales by Region bar chart to compare regional performance.
- Developed a Sales by Category donut chart to analyse category-wise sales.
- Created a Monthly Sales Trend line chart to monitor sales over time.
- Developed a Top 10 Customers by Sales chart to identify high-value customers.
- Created a Profit by Segment column chart to compare segment profitability.
- Added Region, Category and Year slicers for interactive data filtering.
- Configured slicer interactions to enable dynamic dashboard updates.
- Created a Business Performance Scorecard to compare actual KPI values against predefined targets.
- Calculated Achievement Percentage and Performance Status using DAX measures.
- Applied conditional formatting using green, yellow and red colours to highlight performance levels.
- Tested the dashboard and scorecard to verify their interactive functionality.
